

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-4 (canceled)

Claim 5 (currently amended): A ~~mobile-communication terminal~~ apparatus comprising:

a ~~hand held phone configured to be connected to having a function of exchanging a radio communication signal with a base station via a radio channel; and~~

B1 a ~~data terminal device which comprises a control unit and a modem, the control unit controlling having a control function of performing a mobile data communication with a data terminal device of a communication partner at least via said hand held the phone and the base station, and a the modem unit for connecting said control unit and said hand held phone and performing an interface operation for the mobile data communication under the control of said control unit,~~

~~wherein the communication apparatus is operated in one of a first mode in which the phone controls a radio communication between the phone and the base station and a second mode in which the control unit controls the radio communication,~~

~~wherein said hand held phone comprises a transmitter configured to transmit comprises status information transfer means for transferring status information of the phone representing its own operation state to said data terminal when the communication apparatus is operated in the first mode device while a communication mode in which said hand held phone leads connection control with the base station, and~~

~~said data terminal comprises a display configured to display device comprises status information display control means for displaying the status information transmitted transferred from said hand held phone on a display unit of said control unit.~~

Claim 6 (original): A mobile communication terminal apparatus comprising:

a hand held phone having a function of exchanging a radio communication signal with a base station via a radio channel; and

a data terminal device which comprises a control unit having a control function of performing a mobile data communication with a data terminal device of a communication partner at least via said hand held phone and the base station, and a modem unit for connecting said control unit and said hand held phone and performing an interface operation for the mobile data communication under the control of said control unit,

wherein said data terminal device comprises status information transfer means for transferring status information representing its own operation state to said hand held phone while a communication mode in which said data terminal device leads connection control with said hand held phone, and

said hand held phone comprises status information display control means for displaying the status information transferred from said data terminal device on a display unit.

Claims 7-17 (canceled)

B2
Claim 18 (currently amended): A ~~hand held phone which is configured to be~~ connected to a data terminal device ~~having a predetermined communication control function required for performing a mobile data communication, and has a function of transmitting transmission and configured to transmit data of said data terminal device to a base station via a radio channel, and receiving reception receive data coming from the base station via the radio channel and transferring~~ transmit the reception data from the base station to said data terminal device, the phone comprising:

a status information transfer means for transferring transmitting unit configured to transmit status information of the phone to the data terminal representing its own operation state and displaying to make the transferred information on a control unit of said data terminal device display the transmitted status information while a communication mode in which said hand held phone leads connection control with controls a radio communication between the phone and the base station is set.

Claim 19 (original): A data terminal device which comprises a control unit having a control function for performing a mobile data communication with a data terminal device of a

communication partner via a hand held phone and a base station connected to the hand held phone via a radio channel, and a modem unit for connecting said control unit and the hand held phone, and performing an interface operation for the mobile data communication under the control of said control unit, comprising:

status information transfer means for transferring status information representing its own operation state to the hand held phone and displaying the transferred information on the hand held phone while a communication mode in which said data terminal device leads connection control of a radio channel between the hand held phone and the base station is set.

Claims 20-22 (canceled)

Claim 23 (original): A hand held phone which is connected to a data terminal device having a predetermined communication control function required for performing a mobile data communication, and has a function of transmitting transmission data of the data terminal device to a base station via a radio channel, receiving reception data coming from the base station via the radio channel, and transferring the reception data to the data terminal device, comprising:

status information display control means for, when status information representing an operation state of the data terminal device is transferred from the data terminal device while a communication mode in which the data terminal device leads connection control between said hand held phone and the base station is set, displaying the transferred status information on a display unit.

Claims 24-27 (canceled)

B3
Claim 28 (currently amended): A data terminal device which comprises a control unit having a control function of performing configured to perform a mobile data communication with a data terminal device of a communication partner via between a hand held phone and a base station connected to the hand held phone via over a radio channel, and a modem unit for connecting configured to connect said control unit and the hand held phone and performing an interface

operation for the mobile data communication under the control of said control unit, the control unit comprising a display, the data terminal comprising:

B3 a status information display control means for displaying unit configured to cause the display of the control unit to display status information of the phone transmitted transferred from the hand held phone on a display unit of said control unit while a communication mode in which the hand held phone leads connection control between controls a radio communication between the hand held phone and the base station is set.

Claims 29-33 (canceled)

B4 Claim 34 (currently amended): A hand held phone for use in a radio communication system, wherein the hand held phone is configured to be connected with a base station over a radio channelschannel, and further connected with a data terminal device having a predetermined communication control function required for performing a mobile data communication, wherein the hand held phone transmits forward data from the data terminal device to the base station, over a first one of the radio channels and receives reverse data from the base station, over a second one of the radio channels and transfers transmits the received reverse data to the data terminal device, the radio communication system being operated in one of a first mode in which the phone controls a radio communication between the phone and the base station and a second mode in which the data terminal controls the radio communication, the phone comprising:

a transmitter configured to transmit status information transfer means for transferring status information representing status of the hand held phone to the data terminal device; and

a controller configured to cause control means for controlling a control unit of the data terminal device to display the transmitted transferred status information when the radio communication system is operated in the first mode while a communication mode in which the hand held phone leads connection control between the hand held phone and the base station is set.

Claim 35 (original): A hand held phone for use in a radio system, wherein the hand held phone is connected with a base station over radio channels, and further connected with a data terminal

device having a predetermined communication control function required for performing a mobile data communication, the hand held phone transmits forward data from the data terminal device to the base station over a first one of the radio channels and receives reverse data from the base station over a second one of the radio channels and transfers the received reverse data to the data terminal device, comprising:

receiving means for receiving status information of the data terminal device from the data terminal device while a mode in which the data terminal device leads connection control between the hand held phone and the base station is set; and

status display means for displaying the transferred status.

Claims 36-37 (canceled)
